Art Unit: 1633

Election/Restrictions

Applicant's election of Group II drawn to claims 14 and 18-29, and elected following species, without traverse, xi) plasmid is acknowledged. However, Applicant has failed to elect one specific nucleotide sequence as required in the restriction requirements filed on 10-03-2007. Hence a further restriction is required from the following Groups:

Compositions and methods which involve a base sequence represented by SEQ ID No: 1 or SEQ ID No: 2, which are each distinct nucleic acid coding sequences which encode specific and unique polypeptides. As such, each nucleic acid does not overlap in scope with the others, are not obvious variants, and have materially different functions. Therefore, the search for each nucleic acid sequence is not co-extensive and it would place an undue burden on the examiner to search and examine all of these inventions together. Applicants must elect one specific nucleotide SEQ ID NO encoding a corresponding polypeptide sequence.

Applicant's amendment filed on 11-06-2007, which added new claims 18-29, necessitates the following supplemental restriction requirement which is applied to the elected invention of Group II drawn to claims 14 and 18-29, and elected species, plasmid.

Species restriction

A species restriction is further required under 35 U.S.C. 121. The presently pending claims are generic to a plurality of disclosed patentably distinct species comprising:

10/559,835 Art Unit: 1633

1) an epithelial cell of the oral mucosa, a skin cell or a fibroblast, as recited in claim 18.

The species are independent or distinct because there are **cells** having different chemical structures, physical properties, and biological functions as the result of comprising different encoding genes. For example, a fibroblast is most commonly found in connective tissue, whereas epithelial cells are most commonly found in epithelial tissue.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 14 is generic.

2) deno-associated virus (AAV), retrovirus, poxvirus, herpes virus, herpes simplex virus, lentivirus (HIV), Sendai virus, Epstein-Barr virus (EBV), vaccinia virus, polio virus, sindbis virus, SV40 or plasmid, as recited in claim 23.

The species are independent or distinct because there are **recombinant expression vectors** having different chemical structures, physical properties, and biological functions as the result of comprising different encoding genes. For example, use of retroviruses in therapy treatment exhibit risks, as insertion of retroviral genes into the host genome may occur at random locations, in contrast adenoviruses are used for localized *in vivo* treatment because avoid the risk associated with permanently altering the host cell genotype or promoting insertional mutagenesis. Thus, the combined features of a particular species, distinct structurally and functionally, would not necessarily overlap with one another when a prior art search is conducted.

Art Unit: 1633

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 14 is generic.

3) ovarian cancer, pancreatic cancer, stomach cancer, gall bladder cancer, kidney cancer, prostate cancer, breast cancer, esophageal cancer, liver cancer, oral cavity cancer, colon cancer, large intestine cancer, sarcoma, glioma or melanoma, as recited in claim 28.

The species are independent or distinct because there are **diseases** having different chemical structures, physical properties, and biological functions as the result of comprising different encoding genes.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claim 14 is generic.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, at least claims 1, 20, 31 and 39 are generic.

There is an examination and search burden for these patentably distinct species due to their mutually exclusive characteristics. The species require a different field of search (e.g., searching different classes/subclasses or electronic resources, or employing different search queries); and/or the prior art applicable to one species would not likely be applicable to another species; and/or the species are likely to raise different non-prior art issues under 35 U.S.C. 101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete <u>must</u> include (i) an election of a species to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

The election of the species may be made with or without traverse. To preserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the election of species requirement, the election shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected species.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the species unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other species.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which depend from or otherwise require all the limitations of an allowable generic claim as provided by 37 CFR 1.141.

10/559,835 Art Unit: 1633

Since the above-mentioned reply appears to be *bona fide*, applicant is given **ONE** (1) **MONTH or THIRTY (30) DAYS** from the mailing date of this notice, whichever is longer, within which to supply the omission or correction in order to avoid abandonment.

EXTENSIONS OF THIS TIME PERIOD MAY BE GRANTED UNDER 37 CFR 1.136(a).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Maria Leavitt whose telephone number is 571-272-1085. The examiner can normally be reached on M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph Woitach, Ph.D can be reached on (571) 272-0739. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

To aid in correlating any papers for this application, all further correspondence regarding this application should be directed to Group Art Unit 1633; Central Fax No. (571) 273-8300. Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to (571) 272-0547.

Patent applicants with problems or questions regarding electronic images that can be viewed in the Patent Application Information Retrieval system (PAIR) can now contact the USPTO's Patent Electronic Business Center (Patent EBC) for assistance. Representatives are available to answer your questions daily from 6 am to midnight (EST). The toll free number is (866) 217-9197. When calling please have your application serial or patent number, the type of document you are having an image problem with, the number of pages and the specific nature of the problem. The Patent Electronic Business Center will notify applicants of the resolution of the problem within 5-7 business days. Applicants can also check PAIR to confirm that the problem has been corrected. The USPTO's Patent Electronic Business Center is a complete service center supporting all patent business on the Internet. The USPTO's PAIR system provides Internet-based access to patent application status and history information. It also enables applicants to view the scanned images of their own application file folder(s) as well as general patent information available to the public.
